

An investment of 10 mil. Euro at COMPA Sibiu – horizontal hotformer Hatebur-Hotmatic, unique in this side of Europe.

Closely following the requirements of its clients, Compa Sibiu continues its efforts for maintaining among top suppliers in the automotive field.

By finding integrated solutions for its clients, starting from forged semi-finished parts, high precision machining, heat treatment and surface protection and up to the final assembly, the company increases the added value of its products, reinforcing in this way its position as a reliable supplier in this dominant area.

Purchasing a high performance horizontal hot forging line from company HATEBUR-market leader in this field- enables the company to extend its business field, meeting in this way the market demands by offering solutions of the highest technological level.

Fully automatic Hotmatic process:

- Automatic bar end detection;
- Integrated shearing system ;
- Integrated cutoff length monitoring for precise volumes;
- Integrated transfer system for the parts;
- Minimized operator influence during forging process;
- Automatic and stable forging process for high quality parts.

Highlights of the machine:

- Maximum diameter for forging standard round parts: 100 mm
- Bar diameter: 28 - 55 mm
- Part weight: 0.17 - 2.0 kg
- Number of forging stations: 4
- Stroke: 60 – 90 parts/min
